

# 400V Communication Power System for Internet of Things Use

## Overview

The up to 400 VDC power solutions feeding the power interface to ICT equipment as defined by ITU-T (Recommendation ITU-T L. 1200 series, , , [i. 3]) and ETSI, are well adapted to straight forward use of renewable energy or distributed power. Vertiv™ NetSure™ HVT is a high voltage direct current (HVDC) power solution designed to ensure the highest levels of system efficiency and reliability. Whether your site. Munich, Germany - 27 May 2024 - With the increasing power requirements of Artificial Intelligence (AI) processors, server power supplies (PSUs) must deliver more and more power without exceeding the defined dimensions of the server racks. 400V DC power is designed to ensure the highest levels of efficiency and. Responding to increased interest in 400 V power distribution for data centers, Anderson Power Products (APP), Emerson Network Power, IBM, Universal Electric Corporation and Vicor Corporation demonstrated a 400 Vdc ecosystem at the recent INTELEC 2014 (Conference on Energy for Communications) in. Adoption of 400VDC power systems in data centers Data centers seeking sustainable growth and operational efficiency are transitioning from AC to DC power systems, specifically leveraging 400VDC technology.

Efficiency beyond the AC

By adopting new energy efficient power feed architecture 400VDC we can solve the many problems with AC distribution and also in -48VDC distribution and reduce the TCO.
