

Agent for CFP2SFP

Overview

The CFP2SFP+ conversion module is pluggable into optical systems with 40G/100G CFP (MSA) interface. This module receives four serial transceivers (SerDes) signals from a CFP port and brings them to four SFP+ ports each running at 10Gbps. The CFP family — encompassing CFP, CFP2, and CFP4 — became the cornerstone of 100G Ethernet transmission across long-haul, metro, and data center environments. Each generation of CFP refined the design — reducing size, power, and cost, while maintaining full compliance with IEEE 802. This document provides technical descriptions, applications, and compatibility information for the following categories of optics modules in the Cisco ® ONS product family: ● Gigabit Interface Converter (GBIC) ● Small Form-Factor Pluggable (SFP) ● 10-Gigabit Small Form-Factor Pluggable (XFP) ● C2Q00000C00D is a high performance QSFP28 to CFP2 converter allowing QSFP28 transceivers to be used in CFP2 based host platforms. The QSFP28 to CFP2 converter has an internal memory area which can be read by the host platform. Once the converter has been programmed for a specific platform, it will. The centum form-factor pluggable (CFP2) is an optical module transceivers used for both telecommunication and data communications application.
