

Cable trays climbing side by side

Overview

These trays consist of two parallel side rails connected by rungs at regular intervals, resembling a ladder. They provide excellent cable support, ventilation, and ease of maintenance, making them ideal for carrying power and communication cables. Cable ladder systems and cable tray systems are designed for use as supports for cables and not as enclosures giving full mechanical protection. They are not intended to be used as ladders, walk ways or support for people as this can cause personal injury and also damage the system and any. Ladder cable trays consist of two longitudinal side members connected by individual transverse members and provide solid side rail protection and system strength with smooth radius fittings and a wide selection of materials and finishes. Materials available: Aluminum, Steel, Steel HDGAF, Stainless. Ladder type cable trays (also called ladder cable trays) are a kind of cable management system formed by two side rails along the length connected by individual rungs forming a ladder-like structure which facilitates easy installation, maintenance and cable ventilation.
