

# Concealed installation in network cabinets

## Overview

Recessed network cabinets are wall-mounted enclosures designed to be installed flush within walls, offering concealed housing for networking hardware such as patch panels, routers, switches, power supplies, and fiber termination boxes. Not sure what outside box your ISP would be installing in there?

I would expect just a modem?

Either way, I would want the modem outside of the cabinet just because modems run hot. If your using non-managed switches, my preference would be inside the cabinet as they produce less heat than POE. Our vast selection of cabinets, thermal management, racks, enclosures for data centers, telecommunications equipment rooms, and enterprise cabling applications help optimize space, reduce energy consumption, and enhance network reliability. No need to fit a square peg in a circular hole anymore. We are specialists at designing and manufacturing high quality. A well-selected cabinet not only optimizes space and facilitates cable management but also ensures operational continuity and the integrity of the equipment. Whether you're setting up a new office or streamlining an existing network, understanding the importance, types, and usage of network cabinets is crucial.
