

# Connecting the power on off buttons for the network cabinet

## Overview

Connect the power cord to a wall outlet. Wait 30-50 seconds for a complete bootup. After bootup completes, press and hold button "1" or "2" for 2 seconds to turn ON/OFF the outlet. Connect the power plug(s) from the device(s) you want to control to IP Switch. When you push the ON button your virtual cab, you want everything to turn on automatically: all the TVs, the audio system, the feedback devices, etc. Likewise, when you're done playing, you don't want to run around shutting everything off separately; you just want to press the OFF button and have. **WARNING:** Identifies information about practices or circumstances that can cause an explosion in a hazardous environment, which may lead to personal injury or death, property damage, or economic loss. If you didn't manage to get a manual, just find this block on the motherboard;. When running power and data cables in overhead or subfloor cable trays, we strongly recommend that you locate power cables and other potential noise sources as far away as practical from network cabling that terminates on Cisco equipment. In situations where long parallel cable runs cannot be. When wiring a basic mechanism to control a device's activation and deactivation, it's essential to follow a clear and efficient approach. Begin by ensuring proper terminal connections to allow the device to function correctly when transitioning between states. The most crucial aspect is identifying.
