

Cutting a 90-degree right-angle bend in the cable tray

Overview

Creating a 90-degree elbow in an electrical cable tray, often called a "fabricated" or "mitered" bend, involves cutting, bending, and fastening a straight section of tray. The most common method involves creating two 45-degree cuts to form a 90-degree angle. (A) = cable tray width (600mm) and B = Size of angle (22°) First you have to find (C) which is found by dividing 90°. Depends on the type of cable tray, you can buy 90° tray fittings or use a speed square with a straight edge and a grinder or skill saw to cut 45° cuts. Do you want a hard 90 or 2 spaced out 45° bends?

Need dimension of tray first width x side wall. Perfect for electricians! #electrician #worklife Keywords: cutting cable tray techniques, 90 degree cable tray bend, cable tray installation tips, electrical work cable tray, bending cable trays, cable tray. The method for producing bridge bend elbows is as follows: Take a 90-degree cable tray bend elbow as an example, and apply the same principles for 45-degree bends accordingly.
