## Overview

The distance between distribution box and switch box shall not exceed 30 meters. OSHA requirements are set by statute, standards and regulations. Low-voltage distribution lines refer to the circuits that, through a distribution transformer, step down the high voltage of 10 kV to the 380/220 V level—i., the low-voltage lines running from the substation to the end-use equipment. This article lays out practical design principles, product choices, and inspection routines to keep temporary. Is distance satisfactory to protect power distribution boxes (breaker boxes, disconnects ranging from anywhere from 50 volts to 440 volts) from damage in active warehouses with stacked material, fork truck traffic, and pedestrian traffic; or does there need to be a protective barrier?

If distance. This document is a summary of rules based on the National Electrical Code (NEC).
