

# Do telecommunication towers need batteries

## Overview

Telecommunication towers keep the world connected, supporting phone calls, internet, and other digital services. Each tower relies on a telecom battery, which provides backup power when the grid electricity is unavailable or unstable.

Understanding the Role. Cell phone towers primarily use VRLA (valve-regulated lead-acid), lithium-ion (Li-ion), and increasingly LiFePO<sub>4</sub> (lithium iron phosphate) batteries for backup power. In telecom sites, batteries serve two primary roles: Backup Power: Instantly support network equipment. Telecommunications batteries are specialized energy storage systems designed to provide backup power during outages, ensuring uninterrupted connectivity for networks. They are critical for maintaining cellular towers, data centers, and communication infrastructure. These batteries are typically,
