

Does the switch use fiber optic connections

Overview

Traditionally, network switches have been connected using copper cables, but with the increasing demand for high-speed and reliable connectivity, fiber optic cables have gained prominence. Moreover, when it comes to bandwidth, no currently available technology is better than single-mode fiber. It can provide significantly higher bandwidth and carry more data. And I have task to buy and configure Cisco 9300 switches with all 48 port would be connected with FIBER using SFPs/GBIG. All end user devices would also be connected via fiber not coper wire. Which 9300 switch model would be best for this purpose (All 48 ports would be connected with. I am planning to connect core switch to multiple switches using 6 strand fiber cable. which type of cnnnection is resilient Star or Ring?

?

?

If I make star then do i have to use new cable to each switch or strand of a cable to patch other switch?

?

Thanks. It usually depends on the model of the switches. A switch with fiber optic ports, often referred to as a fiber optic switch, is a network device that contains both traditional Ethernet ports (usually copper RJ45 ports) and fiber optic ports. Depending on the specific requirements of the network, these switches provide the flexibility to...
