

# Fiber Optic Patch Cord Movement Pull Test

## Overview

Watch us stress-test our SC/APC Pull-Push Patch Cord to the limits according to IEC 60794-1-2. See if it can handle the real-world pulling forces of a dense data center. This Applications Engineering Note (AEN 135) explains and recommends standard measurement methods for characterizing optical fiber system performance. Our SC/APC Pull-Push patch cord successfully passed the IEC tensile strength requirement, proving its durability for secure and. Optical Loss Test Set (OLTS): includes a stabilized light source and an optical power meter. Used for simple end-to-end IL measurement. Variable Optical Attenuator (VOA): sometimes used to calibrate or adjust the launched power. Optical Time Domain Reflectometer (OTDR): primarily used for longer. Equipment cords are an integral part of any network—whether it's a fiber jumper used to make connections between fiber patching areas and switches in the data center or a copper patch cord out in the LAN to connect end devices to the work area outlet.
