

Grounding Requirements for the Top Busbar

Overview

What Listings or Standards Should I Require?

For North America, require UL 467 listed ground bars and follow NEC Article 250. For telecom rooms, TIA-607-D defines hole patterns and grounding bus requirements; consider CSA C22. Where Does a Ground Bus Bar . At the heart of a good grounding scheme is the ground bus bar: a solid, low-impedance conductor that ties all equipment grounding conductors (EGCs) together and connects them to the grounding electrode system. While ensuring public safety is the highest priority, the industry began to realize in the late 1980s and early 1990s that the electrical. Proper bonding is essential to create an equipotential plane between service grounds and equipment during fault and transient conditions. The ground return conductor should be equal in size and circular mil area to its corresponding voltage conductor.
