

# How to connect fiber optic cable to the server chassis

## Overview

For fiber optic cable, use horizontal finger style with front cover cable managers in a 1U or 2U footprint. Consider wide body cabinets (wider than 24 inches) along with vertical cable managers (4", 6" or 12" wide) for core cabinets, main patch cabinets, or cross-connect. Installing fiber optic cables in a server rack requires careful planning and execution to ensure network reliability and minimize potential damage. Before installing fiber optic cables, it's. In this lab, your task is to: Connect the CorpiSCSI server to the Cisco switch using the appropriate fiber optic cable. When connecting the server. When installing fiber optic jumpers and copper patch cords from the patch panel to active ports within the same cabinet, use a combination of horizontal and vertical cable management to route cables from the left side of the patch panel to left side active ports, and the right side of the patch. How do I setup the fiber on the servers to communicate with one another's. Do I have to setup an ISCI connection on the server with a LUN and an Initiator?

If so how do I do that?

Thank you Normally, fiber is just Ethernet. The only difference is the physical interface.
