

# How to connect the network cable in the broadband distribution box

## Overview

Run four Cat6 cables (with RJ45 jack points) from the home distribution box to the main entertainment hub and at least two Cat6 cables to all other outlet positions. Whether you're an electrician or a DIY enthusiast, this guide will help you understand the basics of home electrical distribution. Ethernet cables are known for their reliability and can provide a stable and fast connection between your devices. We will install an ETP when we come to complete the connection but if you want to install one earlier, they can be purchased from an electrical store from the ETP to the home distributor box. Placing the router in a service cupboard or under stairs cupboard will significantly reduce the speed and coverage you ports within the home. Ideally for optimum speeds to be enjoyed using Wi-Fi service it is recommended that you locate the router centrally within the home. Although wireless is simpler for a lot of people, due to multimedia sharing, bandwidth on my home network and my slight paranoia about wireless security, I really wanted to use a hard wired solution for home networking. Having a wired network allows me to have a private, high speed, network at home. A wired ethernet connection will give you the highest throughput (speed), the lowest latency, and the most stable network connection you can get in your home.
