

How to fix optical fiber cables after splicing

Overview

This article outlines five specific steps for repair: 1) Identify the break; 2) Cut out the damaged section; 3) Strip the cable; 4) Trim the fiber ends; 5) Test the repair. DIY fiber optic cable repair kits are increasingly popular for those who prefer home repairs. This wikiHow article will teach you how to splice a cut fiber optic cable back together with a fiber optic stripper and cutter and a fiber optic crimper. Once these tools are ready, you can start the repair step by step. Fibre is often made of extremely thin strands of glass so if it is damaged in a particular area, then that section needs to be removed, and the remaining fibre would need to be carefully re-spliced. This guide provides essential steps for cutting and repairing broken fiber optic cables at home. Begin by identifying the damage, which can be done using an Optical Time Domain Reflectometer (OTDR).
