

How to network surveillance fiber optic cables

Overview

Whether you're a network installer, system integrator, or just exploring how to wire a surveillance system across long distances, this video breaks it all down step by step. 0:00 Planning a multi-location IP camera setup Connecting devices across 150m using fiber and. IP cameras that are part of a modern surveillance system are deployed using PoE technology that involves the use of copper based network cabling like CAT5e or CAT6 that has a data transmission limit of 100m (328ft). While that is adequate for installations for a home or small business, large scale. In this video, we walk you through a real-world IP camera installation project that involves setting up a network for 10+ cameras across a 150-meter distance between a garage and a control room. You'll learn how to use fiber optic cables, PoE switches, SFP transceivers, and media conver. more In. g can be a more cost-efficient alternative. Even though it is more expensive per meter, the superior transmission characteristics of a fiber-optic cable reduces the need for expensive signal amplifiers along the way, and makes i s and how it can be used in network video.
