

IPTV access switch configuration

Overview

Choose Configuration > Device List, and then click next to the S380. Choose LAN > LAN Interface, select the interface for connecting to the IPTV interface on the interface panel, and set Interface mode to Access and. These capabilities enable the switches to deliver a stable multicast IPTV service for hotels of any scale. Since Omada Controller version 6. It offers scenario-oriented settings tailored for hotel IPTV. This article describes the step-by-step configuration process to segregate IPTV service through all access Switches. Television delivery service can broadcast simultaneously in a Multicast format. The available program signals flow downstream, and viewers select. This article will introduce how to configure the IGMP Snooping on Omada switches in the hotel IPTV scenario, including the standalone and controller modes. With this feature enabled, the switch can passively snoop on the IGMP packets transferred between IP multicast routers/switches and multicast clients to learn the multicast group. Specifically, you need to establish a Layer 2 VLAN between the IPTV port of the optical modem and the TV so that IPTV data can be forwarded in the VLAN. Here is an example for IGMP Snooping configuration.
