

# Intelligent distribution box displays grounding failure

## Overview

Detects high resistance faults, identifying and locating grounding faults with fault currents greater than 0. Identifies and alerts early failure of distribution equipment such as insulators, transformers, arresters, and external threats such as tree barriers and bird nest. ABB offers a total ev charging solution from compact, high quality AC wall boxes, reliable DC fast charging stations with robust connectivity, to innovative on-demand electric bus charging systems, we deploy infrastructure that meet the needs of the next generation of smarter mobility. ABB's Low. II energy management in single-phase residential power applications. The PZEM-004T100A module for measuring electrical parameters and the ZMPT101B voltage sensor for monitoring voltage levels are two exam les of the advanced sensor technologies integrated into the project. The system makes the distribution network more visible, aiding power companies in reducing downtime. In the world today the distribution of electricity has evolved to the point where electricity is been delivered through smart grid network, in other to harness the full power and efficiently too smart equipment is required, the 60A smart distribution board is one of this equipment. The aim of this. Next, we describe directional elements suitable to provide ground fault protection in solidly- and low-impedance grounded distribution systems.
