

Internal Structure of Optical Line Terminal

Overview

An OLT (optical line terminal), also known as optical line termination, acts as the endpoint hardware device in a passive optical network. The OLT contains a central processing unit (CPU), passive optical network cards, a gateway router (GWR) and a voice gateway (VGW) uplink cards. It provides two main functions: to perform conversion between the electrical signals used by the service provider's equipment and the. The Passive Optical Network (PON) is the indispensable foundation for delivering ubiquitous, multi-gigabit broadband connectivity, a necessity for modern economies and residential life. When you stream a 4K video, join a remote meeting, or play an online game on a gigabit fiber connection, an OLT. Generally, the FTTH broadband connections consist of two types of systems, known as Active Optical Networks (AON) and Passive Optical Networks (PON). So, let's get started with a basic introduction. The way of data communication through.
