

Is the 10Gbit switch port an optical port or a network port

Overview

A 10G SFP+ switch is a network switch equipped with SFP+ ports that support 10Gbps speeds. Devices (such as servers, routers and other network switches) are connected to the 10G SFP+ switch via SFP+ modules. 10 Gigabit Ethernet (10GE, 10GbE, or 10 GigE) is a group of computer networking technologies for transmitting Ethernet frames at a rate of 10 gigabits per second. It was first defined by the IEEE 802. Unlike previous Ethernet standards, 10GbE defines only full-duplex. Common optical port types for switches include 155M, 1. >>>Read More:What is the difference between SFP+ high speed cableSFP+ electrical port moduleSFP+ optical module Ethernet ports on switches already integrate Ethernet port modules internally, eliminating the need. I'm trying to understand how to tell if a Cisco port is using 10G as it is capable. From what I can tell this port is using 1GB due to the media type. These are available in the SFP+ electrical/mechanical package and follow IEEE optical budgets and wavelengths; SFP legacy optics were not specified for 10G link budgets.
