

# Is the length of the optical cable marked

## Overview

Fiber optic cable lengths are generally expressed in meters or kilometers. Kilometer: 1000 meters / 3,281 feet / 0. 25 microns equal. One of the questions I get asked about regarding optical cable measurements is: "Why don't my OTDR and jacket length markings agree?"

" The answer depends on the type of cable being made. We brought the cable back to our office with the intention of opening it up and creating a video about the construction of this modern high fiber count cable, but something got our attention. Optical fiber cables are not required to be listed and marked where the length of the cable within the building, measured from its point of entrance, does not exceed \_\_\_\_\_ ft and the cable enters the building from the outside and is terminated in an enclosure. Make sure you use a consistent format, such as "FB-03-A142" where FB indicates fiber, 03 is. A TOSLINK optical fiber cable with a clear jacket. A fiber-optic cable, also known as an optical-fiber cable, is an assembly similar to an electrical cable but containing one or more optical fibers that are used to carry. e National Electrical Code (NFPA 70). FLS believes that outdoor cable should not be installed within buildings in lengths greater than 50 feet if it does ot meet the requirements of NFPA 70.
