

# Korean fiber optic heat shrink tubing is resistant to high temperatures

## Overview

This type of tubing has two layers to insulate and protect the cables from exposure to moisture, abrasion, and extreme temperatures with its existing adhesive seal. Outer tube: Shrink around the steel rod and the inner tube, to keep the steel rod and the inner tube tightly together. Available in single wall tubing and dual wall tubing, our heat shrinkable tubing is engineered for use in numerous applications, including back-end connector sealing, breakouts, and. Heat shrink tubing is no longer just a consumable. As highlighted in the report, it has become a strategic safeguard for electrical safety, sealing, and reliability. However, the information being transmitted can. Heat shrink tubing serves multiple purposes in the protection of fiber optic cables within telecom networks: Mechanical Protection: By providing a durable outer layer, heat shrink tubing shields fiber optic cables from physical damage caused by abrasion, bending, and impact. Ideal for industrial, telecommunications, and aerospace.
