

Ladder-type cable trays for cable routing

Overview

Perforated rungs on a ladder-type tray securely fasten cables using cable ties. Additionally, their open design prevents moisture. There are several types of cable trays, including ladder, perforated, solid bottom, basket, and channel trays. Each cable tray type performs a different function and comes in various materials such as aluminum, galvanized steel, and FRP. Considering the specific requirements of the industries, these trays are designed uniquely. They come in different sizes to make the process effortless. This ladder type cable tray is suitable for the laying of larger diameter cables, especially for the laying of high and low. Explore various cable tray types and sizes for electrical installations. These trays consist of two parallel side rails connected by rungs at regular intervals, resembling a ladder.
