

# Neutral and Live Wire Distribution Box

## Overview

Distribution board is a safe system designed for house or building that included protective devices, isolator switches, circuit breaker and fuses to safely connect the cables and wires to the sub circuits and final sub circuits including their associated Live (Phase) Neutral . Distribution board is a safe system designed for house or building that included protective devices, isolator switches, circuit breaker and fuses to safely connect the cables and wires to the sub circuits and final sub circuits including their associated Live (Phase) Neutral . The International Electrotechnical Commission (IEC) wiring codes are followed by most European countries. Note: Older European systems sometimes use alternative colors of line, so never be sure of wiring in old buildings without checking it. The UK has adopted the same IEC standards, but you will. Live (L) Wire Connection: In a distribution box setup, the incoming live wire (also known as phase or hot wire, denoted as L or Line) connects to the line terminal of the circuit breaker. This serves as the primary source of electrical energy from the mains supply. Neutral (N) Wire Connection: For. Before attempting any kind of home DIY electrical work, you need to fully understand what to expect.
