

No network after the switch connects to the fiber optic cable

Overview

This guide provides a practical, engineer-focused SFP troubleshooting framework that helps identify and resolve common issues including no link, module detection failures, and fiber connectivity problems. We have a fibre run, SM, 650 meters, with Level1 dumb switches at each end, I get Link lights at both ends, but there's no network traffic. Switch B is on the remote end, 3. This document describes how to troubleshoot fiber optic interfaces by addressing some of the fiber optic module and cabling specifications. There are no specific requirements for this document. → You literally just plug it in. When issues like signal loss, slow speeds, or intermittent connectivity arise, systematic troubleshooting is key. The link appears to be dead and I'm hoping to fix it, but I have little to no experience with fiber.
