

OPGW optical cable stripping method

Overview

To strip the optical fiber coating layer, you must master the three-character fiber stripping method of flat, stable and fast. "Flat" means holding the fiber flat. The exposed length is. Proper termination of OPGW cables involves precise steps like careful handling 3, removing outer layers, cleaning fibers, and securing with clamps. These steps maintain cable integrity and functionality, ensuring efficient and reliable network performance. Different types of optical closures are used. First, a heat-shrink tube is placed over the OPGW cable. After that, the cable is secured with a clamp or another suitable tool to ensure stability while removing the.
