

Optical modules and switch ports

Overview

Switch optical modules, which convert electrical signals to optical signals and vice-versa, and optical interfaces, which serve as the physical connection points, play a pivotal role in determining the speed, distance, and reliability of data transmission. Small Form-factor Pluggable (SFP) is a compact, hot-pluggable network interface module format used for both telecommunication and data communications applications. Transceiver compatibility is a key concern in enterprise network deployments. Think of it as the “translator” for your network equipment, converting electrical signals into optical signals. An optical transceiver is a modular component that converts electrical signals into optical signals (and vice versa). Key characteristics include: Speed: 1 Gbps, 10 Gbps, 25 Gbps, or higher.
