

# PoE switches consume network speed

## Overview

PoE switches do not degrade your internet speed. In fact, compared to Wi-Fi, they offer a more stable and often speedier connection. This is because PoE switches use separate wires for data and power transmission, meaning power delivery does not. The answer is emphatically no. PoE does not reduce network speed, does not waste excessive power when proper cabling standards are. Therefore, everyone is concerned about whether PoE switches will affect speed. Key Benefits of Power over Ethernet Easy Scalability Using. How to Reduce the Power Consumption of PoE Switches?
