

# Power off the core switch directly

## Overview

Theoretically, Cisco recommends you save the command and issue the "reboot" command. Once the terminal or console loses connection then you power off the chassis. Reza 06-01-2012 05:47 PM Hello Simon, I agree with. is it just turn off the power switch at the back of router/switch or need to issue some command in user EXEC mode /privileged mode to shut down the router/switch?

explain please, thank you 07-04-2008 04:33 AM You needn't any commands for doing this. 07-04-2008 04:35 AM there isn't a "shut down". If you are using an TFT kit or TriBoard the board can be powered directly by USB or by the power connector. power on reset you need to remove both). You must manually power off the CP blades by lowering the slider or removing power from the chassis. To deploy this switch effectively and ensure trouble-free operation, you should first read the relevant sections in this guide so that you are familiar with all.
