

# Should I change the internet speed of my fiber optic router

## Overview

The speed at which you should set your router depends on your internet plan and the devices you are using. If you have a high-speed internet plan and multiple devices that require a strong connection, it is recommended to set your router to a higher speed setting to ensure optimal. Most homes can unlock real speed and stability with a few smart settings you can change today. In this guide, we'll show you actionable gains from better placement (high, central, open), a clean band split (5 GHz for work/gaming, 2.4 GHz for everything else), a clean band split (5 GHz for work/gaming, 2.4 GHz for everything else), 2. You can upgrade to 1 gigabit speed, 2 gigabit speed and now even 7 gigabit speed—that's more than 25 times faster than the average broadband connection in the U.S. Connection: To squeeze the absolute last drop of bandwidth out of your connection, you will need to be. The article examines seven ways to improve the speed of your optic fiber. Select an ISP that provides a service level agreement (SLA) for a specific level of performance. Wi-Fi signals don't perform well when blocked by walls, furniture, or other obstacles. Upgrading to a plan with a higher bandwidth doesn't help if your router can't handle your current network load or faster internet speeds. You must reboot, reset, or swap it out for a better model.
