

# The main and secondary routers are connected via fiber optic cable

## Overview

The Internet backbone ensures global connectivity by interconnecting major networks through high-capacity fiber-optic cables and high-performance routers. This infrastructure supports the rapid transmission of data across vast distances, maintaining low latency and high reliability. A common solution is to connect two routers on the same fibre optic line. In this article, Axarfusion will guide you through the steps to achieve this configuration and ensure that both routers work in harmony to give you a seamless browsing experience. Connect the modem to the first router. Low latency for. yes, for single-mode modules, you'll need single mode fiber/cable. Assuming you don't have experience with manufacturing the proper cable, the number of strands don't count into it, really. This comprehensive guide combines industry standards with field-tested practices to ensure you achieve a rock-solid.
