

The main switch for the lighting distribution box cannot be turned on

Overview

If you try putting the tripped switch back to the “on” position but it either immediately trips again or it just won't go back “on” then try the following: Switch off the Main Switch. This may be labelled “Main Switch” or just be the biggest (and probably red). When an electrical fault occurs – either in a circuit or appliance – the switch on the fuse board is designed to detect this and “trip” – switch to the “off” position. As. Before you begin any inspection, you must prioritize safety by locating your circuit panel and turning off the power to the affected light. If there are any issues with. The good news is that most issues are easy to troubleshoot, especially if you follow the steps below. You will want a voltage tester (doesn't need to be a voltmeter) for this job. The main switch takes the incoming power supply from the mains and sends it to the various components inside the electrical panel.
