A machine for fiber laying underground is a specialized engineering device built exclusively to install fiber optic cables, protective conduits, and related communication pipelines beneath the ground surface, with a core focus on cutting manual labor, reducing surface excavation . Trenchless cable laying is a real challenge. Our cable plough systems are environmentally friendly, efficient and ideal for laying underground cables. Our machines can lay up to 10,000 metres per day. OFC cable laying involves working across varied soil conditions, narrow corridors, and long stretches of alignment. Maintaining uniform trench depth and width while ensuring safe duct placement is a major challenge. Poor coordination between trenching and backfilling can also affect cable. Whether backbone or last mile, it can be used to lay fibre optic cables and establish fibre optic connections - without high costs and lengthy civil engineering work.
