

Venezuela ADSS optical cable 8 cores

Overview

Lightweight 8-core ADSS fiber optic cable with FRP strength member. Lightning-proof, weather-resistant design for overhead installations. The "All Dielectric Self-Supporting (ADSS)" cables are designed for aerial self-supporting applications at short, medium and long span distances. ADSS cables offer a rapid and economical means for deploying optical fiber cables along existing aerial rights-of-way. The ADSS aerial. Kabel Fiber Optik 8 fibers, also called ADSS fiber optic cable is designed to be used on last mile installation routes to connect final users to FTTH or GPON line. This ADSS fiber cable especially suitable for application where requests small diameter but with high mechanical strength during network. All-dielectric self-supporting cables (ADSS) are non-metallic, making them free from lightning and overvoltage problems when used along electrical power lines. Designed to be lightweight yet strong enough for installation between support towers, these cables withstand the strain of natural elements. In the modern era of telecommunications, 8 core optical fiber cable adss play a pivotal role in ensuring seamless connectivity across various devices and networks. Fibres are positioned into loose tube made of high modulus plastics.
