

What do relay protection plants do

Overview

In automated plants, protective relays integrate with control systems to monitor electrical health continuously. They protect critical machines, minimize downtime, and ensure production processes remain safe and efficient under both normal and fault conditions. Long term cost reduction (TCO) for trainings and maintenance by reduce variety of relays A fast and selective arc fault mitigation for air-insulated LV & MV switchgear and Relion protection and control relays and sensor. Protective relays and devices have been developed over 100 years ago to provide “lastline”of defense for the electrical systems. The relays are in round glass cases. It functions as a watchdog by constantly surveying multiple system components including voltage, current, frequency, and phase angle.
