

Where does the fiber optic cable connect to the cable in West Africa

Overview

Anchored in Kenya, the fiber-optic cable will run through Uganda, Rwanda, the Democratic Republic of Congo (DRC), Zambia, Zimbabwe and South Africa, from where it will continue along the Indian Ocean bed to Australia. While submarine communications cables are used to connect countries and continents to the Internet, terrestrial fibre optic cables are used to extend this connectivity to landlocked countries or to urban centers within a country that has submarine cable access. In most of the world, a large number. Workers haul part of a fibre optic cable onto the shore at the Kenyan port town of Mombasa. WIOCC's regional network comprises the national transmission backbones of its shareholders. The West Africa Cable System (WACS) is a 14530km submarine cable system connecting 15 countries, starting from South Africa and ending in London. The WACS consists of four fibre pairs. It was initially designed with 128 wavelengths per fiber pair, running at 10 Gbps per wavelength, and initial. Africa has seen a major rise in subsea cable connectivity in recent years and together with the enhancement of regional and national fiber networks, the continent's connectivity matrix is making encouraging strides.
