

Which is better fiber optic broadband or a 4G wireless router

Overview

While fibre is generally faster and more reliable, 4G offers more flexibility and convenience for those who need internet access on the go. While fiber optics have an edge over copper, wireless broadband is becoming more popular. This makes it ideal for heavy usage, such as streaming high-definition content, gaming, or working from home with multiple devices connected. However, they're quite different in performance and applications, so it's essential to understand how each one works and where each excels. Fiber internet is the best internet type, but 5G home internet is a solid contender. 5G home internet, by comparison, isn't as fast nor nearly as reliable. 4G is a wireless technology that relies on cellular networks to transmit data, offering fast speeds and widespread coverage.
